

We want to make your website more attractive and enjoyable for your customers and consumers by improving design and navigation to make it accessible, and ensure your users find exactly what they need.

We transform your thought and ideas into reality through concrete design solutions. We solve complex problem statements and provide outstanding designs. We have a portfolio filled with products that breaks the boundaries of design, targeting and reaching the audience around the world.

We employ a customised UI UX design approach to every project to settle on the right course of action. Our belief in ethical and accessible design solutions have made us the best option for design across companies, businesses and industries.

We take pride in providing meaningful and action-driven data insights that resonates with the objectives of businesses and represent the user's voice. We also conduct an evaluation to inspect the quality of the various aspects of products design.

UI/UX Design products and Services

Our products and services are designed and structured to meet your needs. We add value to your business by utilizing the right technology and understanding and knowing what your customers need. We add a cultural sensitivity to our services because we recognise and understand every product's place.

Digibar combines technology with design thinking to create exceptional digital experience. We use a multidisciplinary approach to serve you. Our services include:

- User Interface Design
- User Experience Design
- Product Design and Strategy
- Digital transformation

User interface (UI) design

Our team of professionals use extensive user experience (UX) testing, internal data, and a leveraged market research to design a UI that surpasses the needs and expectations of your users. With pleasing page layouts, helpful contents and features and intuitive navigation, we assure you of the best design that will skyrocket your business.

Product design and development

We employ analytics and research-derived data to develop digital goods that satisfy your clients' demands and guarantee the final product caters to a wide range of consumers. Our product design and development solutions.

Digibar is here to guide you through the process of building an internal business platform, new website, improve upon an existing website, mobile application, or any other digital product with speed and efficiency.

We use a data-based approach and advanced technologies to create solutions that allow your employees, stakeholders and customers to enjoy practical and meaningful experiences. Digibar gives you a streamlined workflow, stronger user engagement, optimized revenue and little support issues.

App development

We want to maximize efficiency and meet deadlines. As a result, we use development sprint processes and in-depth designs to build mobile Apps that will create new opportunities for your business and customers and solve any problem that arises.

Our product design and development process

We use a five-step process to design and develop projects. They are:

1. Discovery

We dive deep into the heart of your business, customers and market to be able to design digital products that create new opportunities and solve problems. We treat your business as though it was ours and find the best designs that will take your business to the next level.

2. Product strategy

We use detailed strategies to build our products. We also make sure we don't exceed the timeline or budget.

3. Design

Our UX design team of experts create and recapitulate on wireframes by conducting market research, stakeholder interviews, and test findings to meet the goals of your business.

4. Engineering

We use wireframes that hold fast to the project requirements to help our developers work effortlessly and efficiently to produce excellent and effective results.

5. Maintenance

We provide a long-term strategic and technical support for products we build to help your business to maintain its efficiency and productivity. Our team of experts make excellent use of technology, visual aesthetics and user experience to help grow your business online. We also help you tackle technical debt, a major obstacle to product value. While our engineers focus on prototype, architecture and building, our designers handle the area of exploration, crafting and engagement. Both parties come together to build outstanding products that work.

Talk to our design experts today!

We will be delighted to educate you on how our UI/UX Design services can strengthen your business. We provide swift but creative and mind-blowing UI/UX services that beat the imagination of customers. We are available and would love to work with you. Entrust your business into our care today. We will make it ours and protect your interest.

Front-End Development

We combine the best technologies (native-OS, mean stack, full-stack and flutter) for your project.

Web Applications

We create dynamic and responsive web applications through the implementation of a seamless blend of agile development.

Mobile Applications

By leveraging the latest technologies, we are able to develop scalable and robust native and hybrid mobile applications.

Custom Applications

We implement the perfect blend of technologies to develop interfaces for IOTs, dashboards and wearables.

CMS Integration

We build accessible platforms that customers can manage in order to design, create, modify and manage the content of the website with ease.

Benefits you will enjoy with UX design.

- Improved brand reputation

You want people to find your website interesting, breath-taking and efficient when they visit for the first time. You want them to revisit your site regularly and have an enjoyable and non-forgettable experience with the services you render. If they do, they will spread a positive impression of your company or business.

However if they are not satisfied or don't find exactly what they need, then your website didn't achieve its goal. Your visitors will leave your website having a negative impression about your company or business.

Improved metrics and conversions

Good UX design improves important website metrics like bounce rate and dwell time and increases conversions. When your website meet the needs of people, the probability that they will enjoy your website and spend more time on it will be high and that will increase the chances that they will convert.
